# 1. Keyword Data

## 1.1 Primary Keywords

**Table 1.1: Primary Keywords.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

<i>Keyword</i>	<i>Difficulty</i>	<i>Search Volume</i>	<i>CPC</i>	<i>Value</i>
telemedicine	98	658273	94.77	2863450
blood glucose monitor	82	337232	23.72	1019093
medical innovation	64	31371	57.94	94519

**Table 1.7: Secondary Keywords for: biomedical business development.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.8: Secondary Keywords for: biomedical fundraising.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.9: Secondary Keywords for: biomedical innovation acceleration.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.11: Secondary Keywords for: biomedical product marketing.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.12: Secondary Keywords for: biomedical product marketing strategy.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.13: Secondary Keywords for: blood glucose monitor.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.14: Secondary Keywords for: clinical data.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.15: Secondary Keywords for: clinical data analysis.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.16: Secondary Keywords for: clinical data provider.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

<i>Keyword</i>	<i>Difficulty</i>	<i>Search Volume</i>	<i>CPC</i>	<i>Value</i>

**Table 1.17: Secondary Keywords for: concussion tracker.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.18: Secondary Keywords for: d-eye.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.20: Secondary Keywords for: fall prevention elderly.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.21: Secondary Keywords for: fall prevention patient.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.22: Secondary Keywords for: health care fundraising.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.23: Secondary Keywords for: health care innovation.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.24: Secondary Keywords for: health innovation acceleration.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

<i>Keyword</i>	<i>Difficulty</i>	<i>Search Volume</i>	<i>CPC</i>	<i>Value</i>

**Table 1.25: Secondary Keywords for: health innovation services.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.26: Secondary Keywords for: healthcare innovation.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.27: Secondary Keywords for: healthcare ontology.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.28: Secondary Keywords for: innovation acceleration services.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.32: Secondary Keywords for: medical innovation.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.33: Secondary Keywords for: medical ontology.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.34: Secondary Keywords for: ophthalmoscope.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.35: Secondary Keywords for: primary care clinic device.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.39: Secondary Keywords for: recognize heart disease.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.40: Secondary Keywords for: reduce heart failure risk.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.41: Secondary Keywords for: retinal examination.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.43: Secondary Keywords for: vision care.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.44: Secondary Keywords for: vision care evaluation.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.59: Related search terms for: medical ontology.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.64: Related search terms for: vision care.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.70: Keywords suggested by Google when entering: concussion tracker.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.79: Keywords suggested by Google when entering: healthcare ontology.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

**Table 1.87: Keywords suggested by Google when entering: reduce heart failure risk.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.

<i>Keyword</i>	<i>Difficulty</i>	<i>Search Volume</i>	<i>CPC</i>	<i>Value</i>
how to reduce risk of heart failure	-	-	-	-
how to reduce the risk of heart failure	-	-	-	-
reduce risk of heart failure	-	-	-	-

**Table 1.88: Keywords suggested by Google when entering: retinal examination.** The “difficulty” is an approximation of the effort that would be required to appear on the first page of Google search results. Search volume indicates the average number of searches per month (exact match). Average CPC indicates the median cost per click on Google AdWords. The Value column indicates the amount (in Euros) it would be worth per month to appear at #1 in Google for the corresponding keyword. All data refer to “exact match”, as this search option is more accurate than “broad match”.
